McIntosh®
LEGENDARY PERFORMANCE™

THE 50TH ANNIVERSARY LIMITED
EDITION MCINTOSH MC275

TUBE POWER AMPLIFIER

KT88
High
Performance
from
McIntosh

OUR ENGINEERING TEAM has created a unique celebration of an iconic product adored by music and audio enthusiasts who refuse to change their passion for the mellow, warm sound of a tube amplifier.

At McIntosh, we believe in learning from history and embracing quality from the past that stands the test of time. The “New” 50th Anniversary Limited Edition McIntosh MC275 tube power amplifier combines modern convenience and performance enhancements without altering the sound character that has made it famous for the past 50 years. Change is good. Embrace it. Quality performance remains timeless. Cherish it.

Introducing the “New” 50th Anniversary Limited Edition McIntosh MC275 tube power amplifier.

Since 1961, the legendary McIntosh MC275’s characteristically smooth, clean, and powerful sound is still the standard of quality for power amplifiers. Musicians have long recognized the musicality of tubes and truly appreciated McIntosh tube amps. Our company embraces all the important qualities of tube amplification and adds what we know best— intense, emotional power. *Sit back...relax... listen... watch... feel.*

McIntosh has endowed the MC275 with all the features to meet the needs of today’s audio enthusiast, while preserving the qualities that have made it the most revered amplifier ever crafted.

The Limited Edition 50th Anniversary MC275 tube power amplifier, in its breathtaking gold chassis, is sure to become the next McIntosh classic.

New patent-pending gold-plated speaker connectors allow easy connection of even the heaviest of speaker wires without power loss. Both balanced and unbalanced inputs sport very high quality connectors, enhancing the flexibility of the amplifier.

A new muting circuit keeps unwanted noise out of your speakers until the amp is fully warmed-up, as indicated by LEDs. Power Control power triggering allows the amplifier to turn on and off with compatible preamps and processors for ease of operation.

McIntosh amplifiers are known for durability and longevity, but as tubes age, it is possible that one may wear out. Sentry Monitor stands by, watching over your tubes, and shuts down the amplifier in case of a tube failure, while LEDs change color to indicate which tube needs replacement. Tubes can easily be replaced to restore performance, greatly simplifying maintenance.

Every tube amp warms up with an intense amber hue, which will count down as the amplifier reaches operational stability, causing the tubes’ illumination to switch to green. The amp is then ready to enjoy for the listening session.

A very limited quantity of this special 50th Anniversary McIntosh MC275 will be created for only the most discerning of audio connoisseurs. Each tube amplifier will be graced with a special anniversary logo and be accompanied by a commemorative booklet and other collectible items. Individuals who are fortunate enough to own this timeless amplifier will certainly be part of a prestigious and exclusive group.
